Computer Methods in Applied Mechanics and Engineering 109 (1993) 399–400
North-Holland

Cumulative contents of Volume 109

Volume 109, Nos. 1–2, October 1993

Numerical investigation of the laminar boundary layer flow around an impulsively moved circular cylinder
C.I. Christov and I.T. Tzankov 1

The theory of density representation of finite element meshes. Examples of density operators with quadrilateral elements in the mapped domain
J. Hugger 17

Recovery and few parameter representation of the optimal mesh density function for near optimal finite element meshes
J. Hugger 41

Universal anisotropic yield criterion based on superquadric functional representation: Part 1. Algorithmic issues and accuracy analysis
M. Dutko, D. Perić and D.R.J. Owen 73

Efficient evàluation of volume integrals in the boundary element method
R. Dallner and G. Kuhn 95

Integration of plasticity equations for the case of Ziegler's kinematic hardening
F. Genna 111

On the computational efficiency of certain upwinding schemes
A. Al-Rabeh 131

Static and vibrational shape and topology optimization using homogenization and mathematical programming
L.H. Tenek and I. Hagiwara 143

Optimization of material distribution within isotropic and anisotropic plates using homogenization
L.H. Tenek and I. Hagiwara 155

An anisotropic *h*-type mesh-refinement strategy
W. Rachowicz 169

Approximate method to compute the eigenvalues and eigensensitivities of mechanical systems
V.F. Poterasu 183

Euromech Meetings 193

Volume 109, Nos. 3–4, November 1993

A natural triangular layered element for bending analysis of isotropic, sandwich, laminated composite and hybrid plates
J. Argyris and L. Tenek 197

Accuracy and effectiveness of preconditioned conjugate gradient algorithms for large and ill-conditioned problems
M. Papadrakakis and N. Bitoulas 219

Three-dimensional incompressible viscoelasticity in large strains: Formulation and numerical approximation
P. Le Tallec, C. Rahier and A. Kaiss 233

Stochastic boundary elements in elastostatics
I. Kaljević and S. Saigal 259

Numerical analysis of a three-fields model for a quasi-Newtonian flow
J. Baranger, K. Najib and D. Sandri 281

Variational principles for a class of finite step elastoplastic problems with non-linear mixed hardening
G. Romano, L. Rosati and F. Marotti de Sciarra 293

An incremental relaxation finite element analysis of viscoelastic problems with contact and friction
W.H. Chen, C.M. Chang and J.T. Yeh 315

Finite volume method for thermo-elasto-plastic stress analysis
I. Demirdžić and D. Martinović 331

Symbolic derivation of kinematic equations of robots via computers
C. Vibet 351

Hybrid stress formulation for higher-order theory of laminated shell analysis
S. Di and E. Ramm 359

An improved solution to thermoelastic material design in functionally gradient materials: Scheme to reduce thermal stresses
K. Tanaka, Y. Tanaka, H. Watanabe, V.F. Poterasu and Y. Sugano 377
